

CONXA

TEACH ONCE. LET AI DO THE WORK.

CINEMATIC PRODUCT FILM — DIRECTOR'S MASTER SCRIPT — REVISION 2

Format	16:9
Master runtime	6–7 minutes (full cinematic pacing)
VC cut	3–4 minutes — includes Conxa Intelligence
Enterprise cut	3–4 minutes — Conxa Intelligence removed or marked roadmap
Hero cut	90 seconds — see Appendix A
Visual language	Premium cinematic corporate / futuristic realism
Camera language	Long takes, motivated movement, drone-to-gimbal transitions, physical camera travel
Editing	Minimal hard cuts. Prefer motivated transitions and camera movement.
UI language	Never fullscreen. UI is always spatially anchored to physical monitors, browsers, phones, or environmental surfaces.
Colour journey	Cold, slightly desaturated and busy before Conxa → warmer, cleaner, more spacious after Conxa.
Core emotional arc	Repetition → discovery → transformation → trust → freedom.

CAST

NEHA	Operations analyst, late 20s. Our primary point of view. Competent, unhurried, in control of her day.
ARJUN	Automation engineer, early 30s. Builds and repairs skills in Build Studio. Colleague, not love interest.
VIKRAM	CEO, mid 40s. Observant. Speaks rarely.
ENSEMBLE	Approximately 40–50 office staff.

NOTE ON REVISION 2. This draft makes six substantive changes to the first script: named characters replace "GIRL" and "GUY"; the workplace-romance subplot is removed; the layoff conversation in the business-outcome scene is rewritten; execution volumes are reduced and made internally consistent; a new lunch-notification scene is added that proves local execution; and Conxa Intelligence is explicitly marked as roadmap capability. A full change log appears in Appendix C.

GLOBAL DIRECTOR'S RULES

CAMERA

- Camera should almost always have a reason to move.
- Avoid generic floating-camera movement.
- Every camera move should reveal either a person, a workflow, a product capability, a relationship, or a business outcome.
- Use long takes whenever possible.
- Do not make the film feel like a collection of screen recordings.

LENSES

- 24mm — environmental / establishing / drone-like movement
- 35mm — human environment / tracking
- 50mm — character interaction
- 65mm — intimate character moments
- 85mm — emotional close-up / CEO observation
- Macro / 90mm — physical details when necessary

Keep depth of field realistic.

CAMERA HEIGHT

Before Conxa: Slightly higher camera height. More compressed compositions. More visual clutter.

After Conxa: Lower, more confident camera. More negative space. Cleaner compositions. More controlled movement.

LIGHTING

Before Conxa: Morning daylight mixed with practical office lights. Slightly cooler. Screens create multiple competing light sources.

After Conxa: Cleaner daylight. More controlled practicals. Warm skin tones. Screens become intentional light sources rather than visual clutter.

UI

Never create the feeling that the actors are suddenly inside a computer. UI should behave as if it is an augmented layer emerging from the real device.

Use subtle glass depth, volumetric edge light, physically motivated reflections, soft shadows, restrained glow, realistic parallax.

Avoid giant floating holograms, excessive neon, sci-fi HUD clutter, fullscreen app screenshots.

EXECUTION LOCALITY — MANDATORY

Conxa executes on the machine it was taught on. Wherever a workflow runs, the film must show the physical device it is running on. When a character issues an instruction from a phone, the film must cut to the desktop doing the work. Never imply that execution happens in an unseen cloud. This is a product truth, a security-review answer, and a competitive difference — it must survive the edit.

SOUND

The soundscape is one of the main storytelling devices.

Before Conxa: Keyboard. Mouse. Notifications. Printer. Phone. Office conversations. Page loads.

After Conxa: The office becomes quieter. Then Conxa's execution sounds become the new rhythm.

At the end: Human world becomes silent. Machines continue.

SCENE 1 — BEFORE CONXA

TIME: 8:00 AM

SHOT 1 — EXTERIOR / DRONE

DURATION: 12–15 sec · **LENS:** 24mm equivalent · **CAMERA:** Drone

MOVEMENT: Slow forward push toward building · **HEIGHT:** 40–60m, descending gradually

LIGHTING: Early morning sunlight, soft directional light

ACTION

BLACK SCREEN.

We hear: Keyboard typing. Mouse clicks. Notifications. Printer. Phone ringing. A page-load sound. A message notification. The sounds gradually overlap.

SOUND DESIGN

Begin almost imperceptibly. One keyboard. Then mouse. Then notification. Then printer. Then another keyboard. Build to controlled chaos.

VISUAL

FADE IN. A modern office building. Morning sunlight reflects across the glass. The drone flies toward the building. Through the windows we begin to see employees. Approximately 50 people. The drone keeps moving.

TRANSITION

At the glass facade, the drone does not stop. The camera passes through the glass. Use invisible VFX transition / CG-assisted camera pass. The reflection on the glass becomes the interior lighting.

CUT IS FORBIDDEN.

SHOT 2 — ENTERING THE OFFICE

DURATION: 30–35 sec · **LENS:** 24mm → 35mm digital transition · **CAMERA:** Gimbal / stabilised Steadicam

MOVEMENT: Forward tracking · **HEIGHT:** 1.6m initially, gradually rising

LIGHTING: Cool daylight + practical overheads · **FOCUS:** Deep enough to maintain environment

ACTION

The camera emerges inside the office. It moves through approximately 50 employees.

We pass one employee. He copies information from one application into another. The camera continues.

Another employee switches between CRM and ERP. The camera continues.

Someone downloads a document. Renames it. Uploads it elsewhere. The camera continues.

Someone checks a spreadsheet against a website. Another employee waits for a page to load.

EMPLOYEE

"Did you finish the verification?"

OTHER EMPLOYEE

"Almost."

Camera continues. Someone receives a notification.

EMPLOYEE

"I'll do it."

Another employee looks at screen.

EMPLOYEE

"It's still pending."

CAMERA

The camera begins rising. We transition from individual workers to the entire floor. 50 people. Dozens of screens. Dozens of repetitive processes.

TRANSITION

Camera rises toward ceiling. Sound reaches maximum density. Hold for one second. Then descend toward the CEO's glass office.

SCENE 2 — THE CEO

SHOT 3 — CAMERA FINDS THE CEO

DURATION: 15-20 sec · **LENS:** 50mm · **CAMERA:** Gimbal
MOVEMENT: Slow lateral push toward glass office · **LIGHTING:** Backlit morning sunlight

ACTION
Camera travels toward the CEO's glass office. Inside: VIKRAM standing. Watching employees. Camera moves behind him. Office floor fills background.

BLOCKING
Vikram remains completely still. Employees continue moving behind him. He watches. His phone is in his right hand. He casually scrolls.

COMPOSITION
Vikram centred-left. Phone on right side of 16:9 frame. Office floor visible.
IMPORTANT: DO NOT CUT TO PHONE. Phone remains physically inside the shot.

SHOT 4 — CONXA AD

DURATION: 15-20 sec · **LENS:** 50mm · **CAMERA:** Static-to-slow push
LIGHTING: Phone screen provides soft facial fill

ACTION
Vikram scrolls. Scroll. Scroll. Normal content. Then: a CONXA advertisement.

CONXA
TEACH ONCE.
LET AI DO THE WORK.

Vikram stops. His eyes shift.
VFX

The advertisement begins to extend beyond the phone screen. First a thin layer. Then the complete content emerges. The UI remains physically aligned with the phone. Use subtle parallax. The phone remains visible. Vikram remains visible. The office remains visible.

SOUND
Office noise drops by approximately 30%. A soft tonal sound accompanies the UI emergence. Not futuristic. Premium. Subtle.

SHOT 5 — CONXA WEBSITE

DURATION: 20-25 sec · **LENS:** 50mm · **CAMERA:** Slow 30-45° arc around Vikram

ACTION
Vikram scrolls. Floating UI:

TEACH YOUR WORKFLOWS ONCE.

LET AI EXECUTE THEM.

HUMANS ONLY WHEN NEEDED.

BUILD. PUBLISH. EXECUTE.

[BOOK A PILOT]

Vikram pauses. Looks toward the office floor.

CHANGED FROM REVISION 1. The call to action is now *Book a pilot*, not *Let's start / Start for free*. An enterprise buyer does not adopt cross-system automation by tapping a free-trial button on a phone advert; showing that undermines credibility with exactly the audience this film is for. The advert now creates interest and a meeting, which is how the sale actually happens.

VFX
Every scroll on the physical phone must correspond exactly to floating UI movement.

ACTION

Vikram taps: BOOK A PILOT. The UI collapses back into the phone.

SOUND

Soft UI compression sound. Office ambience returns. Vikram looks at his employees.

SCENE 3 — THE TRANSFORMATION

SHOT 6 — TIME PASSES

DURATION: 8–10 sec · **LENS:** 50mm · **CAMERA:** Slow push-in · **LIGHTING:** Slightly darker exposure

ACTION

Hold on Vikram. Phone. Office.

TRANSITION

Camera slowly pushes toward the phone. Screen fills the frame. Phone screen becomes black. BLACK. Silence.

6 MONTHS LATER

Hold 2 seconds.

SCENE 4 — NEHA STARTS HER DAY

SHOT 7 — NEHA ENTERS

DURATION: 15-20 sec · **LENS:** 24mm · **CAMERA:** Low gimbal / low drone-style movement
HEIGHT: 60-80cm · **MOVEMENT:** Camera glides backward as Neha walks forward · **LIGHTING:** Clean morning daylight

ACTION
NEHA enters. Camera travels backward. She walks toward her desk. Places bag down. Pulls chair. Sits. Opens computer.

CAMERA
Camera arcs around her desk. We move from behind her shoulder to profile. Monitor enters composition.

SHOT 8 — CONXA

DURATION: 30-35 sec · **LENS:** 35mm · **CAMERA:** Slow orbit around desk
LIGHTING: Monitor provides soft key on Neha's face · **UI:** Spatially anchored to monitor

ACTION
Monitor wakes. Conxa appears. UI grows outward from the monitor. Not fullscreen. Neha remains visible. Office remains visible.

CONXA
"Good morning."

Neha smiles.

NEHA
"Morning. Let's start."

CONXA
"Overnight execution is complete.
I executed 340 workflows.
322 completed successfully.
12 require human review.
6 require repair."

Pause.

CONXA
"Would you like details regarding these workflows?"

NEHA
"I'll do the human reviews first."

CHANGED FROM REVISION 1. Volumes reduced from 1,432 / 1,386 / 48 / 8. Two reasons. First, 1,432 overnight workflows describes a scale no first customer will reach, and a prospect who does the arithmetic will ask who is running that volume — a question we cannot yet answer. 340 reads as a real mid-sized operations team. Second, the original numbers did not add up: 1,386 + 48 + 8 = 1,442, not 1,432. The new set is internally consistent — 322 + 12 + 6 = 340. Someone in the room will check.

VFX
Numbers appear one at a time. 340 → 322 → 12 → 6. Do not animate all numbers simultaneously.

SOUND
Each number appears with a soft tactile confirmation.

SCENE 5 — HUMAN REVIEW

SHOT 9 — REVIEW QUEUE

DURATION: 15–20 sec · **LENS:** 35mm · **CAMERA:** Over-shoulder tracking, slow lateral slide

UI

Neha scans the queue. Selects the first item.

SHOT 10 — CHROMIUM

DURATION: 30–35 sec · **LENS:** 35mm · **CAMERA:** Arc from Neha's face → monitor → browser

MOVEMENT: Slow controlled arc · **FOCUS:** Rack focus between Neha and browser

ACTION

A Chromium browser visually emerges from the monitor. The browser extends into the physical environment. Neha remains visible. Office remains visible.

UI

Neha examines. She clicks: APPROVE.

VFX

Current review card collapses. Next review rises into place.

CONXA
"Review approved.
Workflow resumed in the background.
Opening next review."

SOUND

Soft confirmation. Then background execution sound begins.

SCENE 6 — THREE REVIEWS

SHOT 11 — CONTINUOUS CAMERA

DURATION: 20–25 sec · **LENS:** 35mm · **CAMERA:** Continuous gimbal

MOVEMENT: Browser → Neha → next browser → Neha

ACTION

Review. APPROVE. Next. APPROVE. Next. APPROVE.

EDITING

No hard cuts. The camera physically travels.

SOUND

Each approval creates a slightly stronger execution rhythm.

SCENE 7 — THE HANDOFF

SHOT 12 — NEHA AND ARJUN

DURATION: 20–25 sec · **LENS:** 50mm · **CAMERA:** Slow orbit · **LIGHTING:** Warm natural daylight

REPLACES SCENE 7 OF REVISION 1 ("A SPARK OF CHEMISTRY"). Two problems with the original. A colleague placing both arms across a seated woman's shoulders reads to a large part of the audience as workplace harassment, whatever the intent — and this film will be watched by HR and operations leaders. Separately, 45–55 seconds of romantic subplot is the first thing a viewer skips in a product film; it buys no product comprehension and no business credibility. The beat that matters — *the work is handed to someone who can fix it, and the day stays manageable* — is preserved here in half the runtime, and the emotional payoff moves to Scene 20, where it is earned by the product rather than by a subplot.

ACTION

Neha continues working. ARJUN stops at the edge of her desk, a comfortable arm's length away. He glances at her screen.

ARJUN

"How's the queue?"

Neha does not stop scrolling.

NEHA

"Reviews are nearly done. Six workflows need repair — that's yours, not mine."

Arjun leans in slightly to read the failure list. Nods once.

ARJUN

"Selectors again. I'll have them republished before lunch."

NEHA

"Before lunch would be good."

A small shared look — two people who like their jobs. He taps the desk once and goes.

CAMERA

Hold on Neha for a beat after he leaves. She returns to the screen. The room is calm.

SCENE 8 — BUILD STUDIO

SHOT 13 — FOLLOW ARJUN

DURATION: 15-20 sec · **LENS:** 35mm · **CAMERA:** Tracking gimbal, follow from behind → side profile

ACTION

Arjun walks to his workstation. Chair. Sit. Camera arcs around. Monitor enters. He opens: CONXA BUILD STUDIO. UI emerges.

SHOT 14 — THE SIX WORKFLOWS

DURATION: 15-20 sec · **LENS:** 50mm · **CAMERA:** Slow push · **LIGHTING:** Monitor key

UI

He opens the first. Workflow timeline appears. Failed step highlighted.

VFX

Failed node pulses subtly. Not red flashing. Use restrained amber/red warning.

SCENE 9 — RECORD / COMPILE / TEST

SHOT 15 — TEACHING THE FIX

DURATION: 30–35 sec · **LENS:** 35mm · **CAMERA:** Side arc / desk orbit

ACTION

Arjun records the correction.

BUILD STUDIO — RECORDING

Recording indicator moves. He stops.

BUILD STUDIO — COMPILE

VFX

Timeline compresses. Raw recorded actions visually transform into structured workflow nodes.

HUMAN ACTIONS → STRUCTURED SKILL

Then: TEST. Workflow executes. Failure. Arjun leans back.

SOUND

Music stops briefly. Only machine hum.

SCENE 10 — HUMAN EDIT

SHOT 16 — REPAIR

DURATION: 20–25 sec · **LENS:** 50mm · **CAMERA:** Slow push toward Arjun · **LIGHTING:** Slightly darker, focused

ACTION

Arjun opens: HUMAN EDIT. He changes a selector. Adjusts a validator.

VFX

Show old selector fading. New selector locking onto element.

Then: TEST. Workflow executes. PASS.

SOUND

First half sparse. Then on PASS: clean tonal resolution.

ACTION

Arjun smiles. Clicks: PUBLISH.

VERSION 1.4.2 — PUBLISHED SUCCESSFULLY

CAMERA

Small push-in on version number.

SCENE 11 — REPAIR ALL SIX

SHOT 17 — CINEMATIC MONTAGE

DURATION: 25-30 sec · LENS: 35mm · CAMERA: Continuous orbital movement

ACTION

Workflow 2. Repair. Test. PASS.
Workflow 3. Repair. Test. PASS.
Workflow 4. Repair. Test. PASS.
Pace accelerates. Workflow 5. Workflow 6. PASS.

VFX

The queue count decreases: 6 · 5 · 4 · 3 · 2 · 1 · 0

6 WORKFLOWS REPAIRED
ALL SYSTEMS OPERATIONAL

SOUND

Music builds. Each PASS becomes part of the rhythm.
Camera rises above the workstation.

SCENE 12 — DRONE TRANSITION TO CEO

SHOT 18 — THROUGH THE OFFICE

DURATION: 15–20 sec · **LENS:** 24mm · **CAMERA:** Crane / drone-style gimbal

MOVEMENT: Vertical rise → forward flight

ACTION

Camera rises above Arjun. Travels across the office. Past Neha. Past employees. Toward the CEO's office.

TRANSITION

Camera passes through glass. No cut. Inside: Vikram seated. Camera settles behind him.

SCENE 13 — CONXA INTELLIGENCE (ROADMAP — SEE NOTE)

MANDATORY NOTE — DO NOT REMOVE FROM ANY VERSION OF THIS SCRIPT.

Conxa Intelligence does not exist yet. It becomes possible only after a customer has accumulated roughly six months of real execution history across hundreds of workflow runs, because the recommendations are derived from that history.

In a live pitch this is easy to caveat verbally. This file and the finished film will be forwarded to people we never speak to — an associate at a fund we are not raising from, a procurement officer who never attended the pilot meeting. The verbal caveat does not travel with the file. Therefore:

- 1. **Enterprise cut:** remove this scene entirely, or retain it with a persistent on-screen marker reading *CONXA INTELLIGENCE — AVAILABLE AFTER 6 MONTHS OF EXECUTION HISTORY*.
- 2. **VC cut:** retain the scene, with the same on-screen marker.

The six-month requirement is an asset, not an apology. It means the product compounds in value the longer it runs, and a competitor starting from zero cannot match a customer's accumulated execution history. Present it that way. Do not let it drift into a present-tense claim — anyone who has seen a lot of AI pitches will ask what data exists today, and the honest answer is that this is a forward capability.

SHOT 19 — CONXA INTELLIGENCE

DURATION: 35-45 sec · LENS: 50mm · CAMERA: Slow arc behind Vikram

LIGHTING: Executive office, controlled daylight

ACTION

Vikram opens: CONXA INTELLIGENCE. UI emerges from monitor. Persistent corner marker appears and remains for the duration of the scene:

CONXA INTELLIGENCE
AVAILABLE AFTER 6 MONTHS OF EXECUTION HISTORY

He types:

"Which customer accounts are most likely to churn, and what actions should we take?"

VFX

Search request appears. Then data streams subtly converge. Do not show meaningless Matrix-style code. Use realistic business data visualisation.

UI

CUSTOMER RETENTION OPPORTUNITIES

Account Northstar — High churn risk, 72%
Recommended action: Executive check-in.

Account Meridian — Usage declining, 41%
Recommended action: Product adoption review.

Account Atlas — Renewal risk, 3 months
Recommended action: Renewal intervention.

Derived from 6 months of workflow execution history.

Vikram studies the screen.

VIKRAM
"Can you handle it?"

Pause.

CONXA
"I can execute the required workflows."

VIKRAM
"Do it."

3 WORKFLOWS QUEUED

Execution begins. Vikram leans back.

SOUND

Music becomes larger. This is the first moment the product feels like infrastructure rather than automation.

SCENE 14 — ARJUN ENTERS

SHOT 20 — UPDATE REQUEST

DURATION: 12-15 sec · **LENS:** 50mm · **CAMERA:** Medium tracking shot · **LIGHTING:** Warm executive office

ACTION

Knock. Arjun enters.

ARJUN

"The six broken workflows are fixed."

VIKRAM

"Good. Push the updates."

Arjun nods. Camera moves with Vikram toward the monitor.

SCENE 15 — DISTRIBUTION

SHOT 21 — CONXA CLOUD

DURATION: 25-30 sec · **LENS:** 50mm · **CAMERA:** Slow push toward monitor · **LIGHTING:** Clean monitor light

ACTION

Vikram opens: CONXA CLOUD. Then: SKILL PACKAGES.

```
Vendor Verification
Current version: 1.4.1
New version: 1.4.2
Status: READY TO DEPLOY

Target: 41 workstations · this organisation
```

Vikram clicks: DEPLOY UPDATE.

VFX

Version package visually travels from BUILD STUDIO → CONXA CLOUD → the workstations on the floor. Restrained visual metaphor, not a technical diagram.

DIRECTOR'S NOTE — WHAT CONXA CLOUD IS AND IS NOT. Conxa Cloud distributes and versions skills. It does not execute them. The visual metaphor must show a *package* arriving at machines, never work being performed in the sky. The final beat of the travel must land on physical monitors on the office floor. This single shot is the answer to the data-residency question every enterprise security review will ask.

CONXA CLOUD

"Deploying version 1.4.2..."

Progress. Then: DEPLOYED.

VIKRAM

"Done."

SCENE 16 — UPDATE REACHES NEHA

SHOT 22 — FOLLOW ARJUN

DURATION: 20-25 sec · LENS: 35mm · CAMERA: Follow tracking shot

ACTION

Arjun walks toward Neha's desk. He arrives.

ARJUN

"All six are fixed. Update's on your machine."

Neha looks.

6 WORKFLOWS UPDATED
VERSION 1.4.2

NEHA

"Give me a minute."

She finishes the task. Looks at the clock. Looks at him.

NEHA

"My queue's clear too."

SCENE 17 — LET CONXA CONTINUE

SHOT 23 — EXECUTION PLATFORM

DURATION: 20-25 sec · LENS: 35mm · CAMERA: Orbit around Neha · LIGHTING: Warm daylight

ACTION

Neha returns to her monitor. Opens: CONXA EXECUTION PLATFORM. UI emerges.

NEHA
"Conxa, the six workflows are fixed. Continue the work."

CONXA
"Version 1.4.2 confirmed. Continuing execution."

Workflows begin.

VFX

EXECUTING
VALIDATING
COMPLETED
RECOVERING
COMPLETED

The system feels alive.

SCENE 18 — HIGH-LEVEL COMMAND

SHOT 24 — NEW SESSION

DURATION: 35-40 sec · **LENS:** 35mm · **CAMERA:** Over-shoulder → lateral arc · **LIGHTING:** Clean daylight

ACTION

Neha opens a new session.

NEHA

"Process today's pending vendor applications, verify the details, and update the ERP with the approved information."

Conxa interprets.

TASK UNDERSTOOD

- 1. Review pending vendor applications
- 2. Verify registration details
- 3. Update approved records in ERP
- 4. Flag exceptions for human review

Neha looks. No complicated interaction.

NEHA

"Go ahead."

CONXA

"Starting execution."

VFX

The plan becomes execution. We see: Vendor portal. Verification system. ERP. The camera physically moves with the workflow.

IMPORTANT. The audience should understand: she gave the instruction, Conxa executes the process, she does not manually operate every system.

SCENE 19 — SHE LEAVES THE DESK

SHOT 25 — NEHA FINISHES

DURATION: 15-20 sec · LENS: 50mm · CAMERA: Slow pullback

UI

EXECUTION IN PROGRESS
HUMAN REVIEW ONLY IF REQUIRED

CONXA

"Execution started. I'll notify you if human review is required."

Neha smiles. Stands. Looks at Arjun.

NEHA

"Lunch."

They walk out of frame.

CAMERA

Camera stays behind. Execution continues in the background.

This is important. The human leaves. The machine continues.

SCENE 20 — LUNCH: WORK CONTINUES WITHOUT THE DESK

NEW SCENE — REVISION 2. This is the scene that converts the film from "software runs while you are away" to "you direct the work from anywhere and it runs on your own machine." It is the most current and most immediately legible idea in the film, because every viewer already recognises the shape of it from using a chat assistant. It also does the security work: the cutaway to the empty desk is the proof that execution is local. Do not cut Shot 27 — without it, a technical viewer reads this scene as cloud execution, which contradicts the architecture and undoes the data-residency claim in Scene 21.

SHOT 26 — THE NOTIFICATION

DURATION: 20–25 sec · **LENS:** 50mm · **CAMERA:** Slow lateral drift at table height · **LIGHTING:** Warm lunch-area daylight

ACTION

Lunch area. Neha and Arjun at a table with three or four colleagues. Plates. Conversation. Nobody is looking at a screen. Neha's phone, face up beside her plate, lights once. She glances down without picking it up.

```
CONXA
Vendor applications processed.
ERP updated — 47 records.
3 exceptions flagged for review.
```

She keeps eating. Says something to the table. Laughs. Then, casually, picks up the phone.

UI

The Conxa layer extends a small distance beyond the phone — the same spatial language as Scene 2, but smaller, more domestic. The table, the food, and the people remain fully visible.

ACTION

She types with one thumb.

```
"Hold the 3 exceptions for me. Start the afternoon reconciliation batch."
```

CONXA

"Exceptions held. Starting reconciliation."

She puts the phone back down, face up, and returns to the conversation.

SHOT 27 — THE EMPTY DESK (MANDATORY)

DURATION: 8–12 sec · **LENS:** 35mm → 65mm · **CAMERA:** Slow push through the empty office floor toward Neha's desk

ACTION

Motivated transition from the phone in her hand to the office floor — the camera travels, it does not cut.

The floor is half empty. Neha's chair is pushed back. Her bag is gone. Her monitor is awake.

UI

```
RECONCILIATION BATCH — EXECUTING
3 EXCEPTIONS — HELD FOR REVIEW

Running locally · this workstation
```

SOUND

Lunch-area sound remains audible but distant, as though heard from the doorway. Machine activity is close and clear.

CAMERA

Push in until the monitor fills a third of frame. Hold two seconds. Then travel back toward the lunch area — again, no cut.

DIRECTOR'S INTENTION. The instruction came from her hand. The work is happening on her machine. Her data never left the building. The audience should feel all three of these without a single line of dialogue explaining any of them.

SCENE 21 — BUSINESS OUTCOME

REWRITTEN FROM REVISION 1. The original scene had the CEO's friend congratulate him on letting people go, cutting headcount costs, and moving to a better office. Revision 1 then carried a director's note insisting the scene must not celebrate layoffs — but a note to the director cannot undo what the audience hears, and the original punchline ("that's why I pay you more," delivered to the two people still working) implies the others were not worth paying.

This matters commercially, not only ethically. The plan is to show this film to enterprises after a pilot. The people in that room are operations leaders whose teams are the ones on screen, and we are asking them to champion Conxa internally. The rewritten scene keeps the full business outcome — capacity, cost per transaction, speed, a better office — and removes the headcount reduction. The result is a stronger claim, because growth without hiring is a bigger number than severance savings, and it is a claim the buyer can repeat to their own staff.

SHOT 28 — VIKRAM ON THE PHONE

DURATION: 45-55 sec · **LENS:** 35mm → 50mm · **CAMERA:** Drift toward Vikram from the lunch tables

LIGHTING: Warm lunch-area daylight

ACTION

Vikram stands at the edge of the lunch area, phone to his ear, watching his floor. We hear only his side clearly; the friend is on speaker-adjacent audio, slightly thinner.

FRIEND (V.O.)

"I saw your numbers. You're processing what — three times what you were?"

VIKRAM

"About that."

FRIEND (V.O.)

"With the same team."

Vikram looks across the floor.

VIKRAM

"Same team. We stopped hiring for the back office and put the roles into delivery instead."

FRIEND (V.O.)

"And your cost per transaction?"

VIKRAM

"Down. A lot. Turnaround went from two days to the same afternoon."

Beat.

FRIEND (V.O.)

"Seriously — how?"

Vikram looks at his team at the tables.

VIKRAM

"Conxa."

Beat.

FRIEND (V.O.)

"The AI agent thing? Doing the actual work?"

VIKRAM

"Exactly."

FRIEND (V.O.)

"What about the data? You're in banking compliance, you can't just—"

Vikram looks back toward the office floor. Behind him, through glass, monitors are working at empty desks.

VIKRAM

"Nothing leaves. It runs on our machines, on the systems we already have. No new infrastructure, no data going anywhere."

This line is visually supported by the working monitors behind him — the same desks we saw in Shot 27.

FRIEND (V.O.)

"Huh."

Beat.

FRIEND (V.O.)

"Okay. Send me the pilot deck."

Vikram smiles. Lowers the phone.

ACTION — THE FLOOR

At that exact moment Neha and Arjun stand from the table. Vikram looks around the room.

VIKRAM

"Who's finishing early today?"

Several hands go up.

EMPLOYEES

"Me."

"Yeah."

"Queue's clear."

"I'm done."

Vikram notices two or three still holding laptops.

VIKRAM

"You three?"

An employee gestures with her laptop.

EMPLOYEE

"Vendor calls. I want to hear what they actually need before we automate it."

Another shrugs.

EMPLOYEE 2

"I'm on the exceptions. The interesting ones."

VIKRAM

"That's the job now."

Easy laughter around the room.

DIRECTOR'S NOTE. Nobody in this film lost a job. The work changed. Repetitive execution moved to the machine; judgement, relationships and exceptions stayed with people — and those are now explicitly described as the valuable work. Play the room warm, not triumphant. No one should be gloating.

SCENE 22 — THE HUMAN PAYOFF

SHOT 29 — LUNCH TABLE

DURATION: 25-30 sec · **LENS:** 50mm / 65mm · **CAMERA:** Slow circular movement · **LIGHTING:** Warm, natural, cinematic

ACTION

Employees talking, laughing, eating. Someone tells a story. Someone laughs. Neha and Arjun exchange an easy look — colleagues who had a good morning. Vikram watches from the edge of frame.

CAMERA

Move slowly around the table. Shallow depth of field. Human faces become the visual focus.

SOUND

Natural laughter. Cutlery. Conversation. Music softens.

DIRECTOR'S INTENTION. This is the emotional payoff. Do not show technology. Show what technology gave people back.

SCENE 23 — OFFICE EMPTIES

SHOT 30 — PEOPLE LEAVING

DURATION: 15–20 sec · **LENS:** 35mm · **CAMERA:** Tracking backward

ACTION

Employees leave. Someone grabs a bag. Someone closes a laptop. Someone turns off a monitor — but not all of them.

EMPLOYEE

"See you tomorrow."

OTHER EMPLOYEE

"See you."

Neha and Arjun leave. Vikram leaves. Doors close. Camera remains inside.

SOUND

Human sounds disappear gradually.

SCENE 24 — AFTER HOURS

SHOT 31 — EMPTY OFFICE

DURATION: 20–25 sec · **LENS:** 24mm · **CAMERA:** Slow dolly / gimbal

LIGHTING: Office lights shutting down sequentially

ACTION

Silence. Lights off, section by section. Only monitors remain. Camera moves through the empty office. Keyboard. Machine hum. A soft notification. No human voices.

Camera approaches Neha's desk.

SCENE 25 — CONXA WORKS WHILE THEY'RE GONE

SHOT 32 — NEHA'S COMPUTER

DURATION: 20-30 sec · LENS: 50mm → 65mm · CAMERA: Slow push toward monitor · LIGHTING: Monitor glow only

ACTION

Chair empty. Desk empty. Computer running. Conxa Execution Platform active.

COMPLETED
EXECUTING
RECOVERING
HUMAN REVIEW REQUIRED
COMPLETED

VFX

Statuses update organically. One workflow completes. Another begins. One enters recovery. Another waits for human review. This subtly communicates that Conxa can execute, validate, recover, and escalate.

CAMERA

Slowly push toward the screen.

CONXA

"Good night."

OVERNIGHT EXECUTION IN PROGRESS

SOUND

Almost complete silence. Only machine activity.

FINAL SHOT — DRONE

SHOT 33

DURATION: 20–25 sec · **LENS:** 24mm · **CAMERA:** Gimbal → crane → drone transition · **LIGHTING:** Night exterior

ACTION

Camera pulls backward from Neha's desk. Moves through the empty office. Through glass. Outside. Drone takes over. Camera rises. Building below. City around it. Office mostly dark. A few screens still glow.

SOUND

Machine hum slowly fades. Music disappears. Silence.

CUT TO BLACK

Hold. No music. No sound. 2 seconds.

AI WAS BORN TO WORK

Hold. Then:

HUMANS WERE BORN TO THINK

Hold. Then Conxa logo.

CONXA

AI EXECUTION INFRASTRUCTURE FOR THE SOFTWARE YOUR BUSINESS ALREADY USES.

Hold 3 seconds. Fade out.

END

NOTE ON THE END CARD. "AI was born to work / Humans were born to think" is close but slightly stiff, and "born to" invites a philosophical argument we do not want. Alternates worth testing in the edit:

- MACHINES EXECUTE. PEOPLE DECIDE.
- THE WORK RUNS ITSELF. THE THINKING IS STILL YOURS.
- TEACH IT ONCE. IT NEVER FORGETS.

The final line — *AI execution infrastructure for the software your business already uses* — is the strongest sentence in the film and should not change. It states the category, the deployment model, and the objection-handler in one breath.

DIRECTOR'S FINAL VISUAL NOTE

The film should never communicate: *AI replaced humans*.

It should communicate: AI takes responsibility for repetitive execution. Humans retain judgement, decisions, relationships, creativity, and accountability.

The visual progression should therefore be:

BEFORE

Human → Software → Human → Software → Human → Software

AFTER

Human → Decision

AI → Execution

Human → Exception / Judgement

AI → Execution

Human → Life

And finally: everyone leaves. Conxa keeps working. That is the final image the audience should remember.

APPENDIX A — THE 90-SECOND HERO CUT

WHY THIS EXISTS. A six-to-seven minute film is a short film, not a product film. Most viewers decide within thirty seconds; an investor will watch ninety seconds out of politeness and the rest only if the first ninety earn it. Build the master, then cut this from it. The hero cut is what goes on the website, in the deck, and in the first email. The master is what plays in a room where someone has already agreed to watch.

Time	Source	Purpose
0:00-0:12	Shot 1-2 (compressed)	The problem, told entirely through sound and one push through a busy floor.
0:12-0:35	Shot 8	The morning brief. 340 / 322 / 12 / 6. This is the single most persuasive twenty seconds in the film.
0:35-0:48	Shot 10	One human review, approved. Establishes that humans stay in the loop by design.
0:48-1:05	Shots 15-16 (compressed)	Record → compile → test → publish. The product's actual mechanism, in seventeen seconds.
1:05-1:15	Shot 21	Deploy 1.4.2 to the floor. Versioning and distribution.
1:15-1:25	Shots 26-27	Phone instruction at lunch, then the empty desk executing. Anywhere control, local execution.
1:25-1:35	Shots 32-33	Empty office. Screens working. Drone out. End card.

Deliberately excluded from the hero cut: the CEO discovery sequence, Conxa Intelligence, the business-outcome phone call, and the lunch-table payoff. Each is valuable in a longer context and none of them survives a ninety-second budget.

SECONDARY CLIPS (cut from the same master)

Clip	Length	Audience
Build & Repair	45 sec — Shots 13-17	Technical buyers and engineering evaluators. Answers "how is a skill actually made and fixed?"
The Morning Brief	30 sec — Shot 8	Operations buyers. The clearest single statement of daily value.
Runs On Your Machines	30 sec — Shots 21, 27, 32	Security and compliance reviewers. The data-residency answer with no narration.
Direct From Anywhere	25 sec — Shots 26-27	Social and top-of-funnel. The most shareable idea in the film.

APPENDIX B — VERSION MATRIX

Cut	Length	Audience	Differences from master
Master	6-7 min	Internal reference	Everything.
VC cut	3-4 min	Investors	Retains Conxa Intelligence with the roadmap marker on screen . Retains the business-outcome call. Compresses Scenes 5-6 and 11.
Enterprise cut	3-4 min	Post-pilot deal close	Conxa Intelligence removed entirely, or retained with the roadmap marker. Emphasises Scenes 15, 20 and 21 — versioning, local execution, data residency.
Hero cut	90 sec	Website, deck, first email	See Appendix A.

A STRATEGIC NOTE, NOT A FILM NOTE. This film commits Conxa publicly to one go-to-market motion: enterprises automating their own internal cross-application work. Every frame is one company, its own staff, its own ERP. The vendor-distribution motion — software vendors shipping precompiled skills to their customers — appears nowhere, and much of the current architecture (branded installers, skill-pack sync, slot billing) was built for that path.

That is a defensible choice, and it matches the stated ICP. But the website, the pricing page and the pitch deck should now say the same thing the film says. An investor who watches this and then reads a vendor-distribution pricing page will notice the seam, and will ask which business we are actually in. Better to answer that question deliberately — internal-enterprise now, vendor distribution as a later channel, with a reason for the sequence — than to have it asked in a first meeting.

APPENDIX C — CHANGE LOG, REVISION 1 → REVISION 2

Area	Revision 1	Revision 2 and reason
Character names	"GIRL" and "GUY" throughout	NEHA (operations analyst) and ARJUN (automation engineer); CEO named VIKRAM. Unnamed roles read as junior and interchangeable to crew and to the audience, which undercuts the claim that the remaining human work is the valuable work.
Workplace romance (old Scene 7)	45–55 sec. Colleague places both arms across seated woman's shoulders; date is arranged	Replaced by a 20–25 sec professional handoff. The blocking reads as harassment to a substantial share of viewers regardless of intent, and the subplot is the first thing skipped in a product film. The human warmth is preserved and relocated to Scenes 21–22, where the product earns it.
Layoff conversation (old Scene 19)	Friend congratulates CEO on letting people go, cutting headcount cost, better office; punchline "that's why I pay you more"	Rewritten around capacity, cost per transaction and turnaround, with no headcount reduction. The film is intended for post-pilot enterprise meetings where the audience is the management of the teams shown on screen. A director's note cannot undo what the dialogue says.
Execution volumes	1,432 / 1,386 / 48 / 8	340 / 322 / 12 / 6. The original scale invites a question about who runs that volume, and the original figures did not sum correctly. The new set is consistent and describes a realistic first customer.
Conxa Intelligence	Presented as shipping capability	Retained, with a mandatory on-screen roadmap marker and a version matrix governing which cuts include it. The film will be forwarded to people who never heard the verbal caveat.
Lunch scene (new Scene 20)	Did not exist	Added. Neha receives a completion notification and issues her next instruction from her phone; a mandatory cutaway shows the work executing on her empty desk. Converts the story from "it runs while you're away" to "you direct it from anywhere and it runs on your hardware," and proves local execution visually.
Call to action (Scene 2)	"Let's start" / "Start for free" tapped from a phone advert	"Book a pilot." Enterprise buyers do not adopt cross-system automation via a free-trial tap, and showing it undercuts credibility with the target audience.
Conxa Cloud (Scene 15)	Package travels to "distributed workspace"	Package explicitly lands on named workstations in this organisation, with a director's note forbidding any visual implying cloud execution. Turns a transition shot into the data-residency answer.
Runtime	7–9 min master, 5–6 min launch cut	6–7 min master with a 90-second hero cut and four secondary clips (Appendix A). Scene durations trimmed throughout. A launch video that requires five minutes of attention will not be watched by the people it is meant to convince.
End card	Fixed copy	Retained, with three alternates to test in the edit. The final infrastructure line is unchanged and should stay.
